SPECIAL SINTERED BRAKE PADS

Recent technology has enabled to develop innovative friction materials from composites such as copper, bronze, iron, ceramic and graphite. Each of these elements has a specific function during braking thus improving the power and effectiveness even in extreme wet and dirty grounds. They also reduce overheating and ensure comfort and modulable braking operation even at low operating temperatures.

Their development comes from the racing use. Today, thanks to the research of compound aimed to a street use, Polini Motori makes them available for all those motorcyclists who only ask for better performance and safety.
